

The Flexible EEG Solution

Flexibility for In-home or Physician Office EEG

Outpatient EEG, Streaming Review with Cloud Software

The Trackit F includes user-friendly features designed with input from neurodiagnostic clinicians. Remotely monitor patients with streaming data on multiple web browsers using cloud software. Accessible on multiple devices including PC, Mac and tablet for study access anywhere, anytime.

Outpatient Ambulatory Video EEG

The Trackit F EEG System is a complete solution for outpatient EEG and HD video monitoring. While it can be used for ambulatory studies in both clinical and home settings, it was designed for a workflow in which the EEG tech deploys the test in a patient's home. The durable plastic hardshell case with customized moldings is rugged and sanitizable, created for in-home use.

Features Include:

- 22" x 14" x 9" high impact protection travel case with handles and wheels
- Waterproof seal (when closed)
- Case holds all components, including amplifier, photic, camera and card reader
- Durable closed-cell case for easy cleaning and protection from scent absorption
- Ultra HD PTZ (pan, tilt, zoom) video camera with 120° clamp mount, with remote control to ensure patients are kept on camera

EEG data review, from anywhere on multiple devices

The Trackit F EEG System streams data and HD video for review via the cloud, with a robust internet connection. Physicians can review live studies from anywhere, on any device, manipulating montage and filters independently from the technologist. This allows immediate feedback and rapid evaluation of potential seizure activity.

EEG Anywhere Payment Options

Our flexible payment options are designed to match your budget. Whichever option you choose, we will be with you every step of the way and you will benefit from the same responsive support that Lifelines Neuro's reputation is built on, as well as rapid replacement of your system should it need repairs.
