

Cloud-based EEG Software

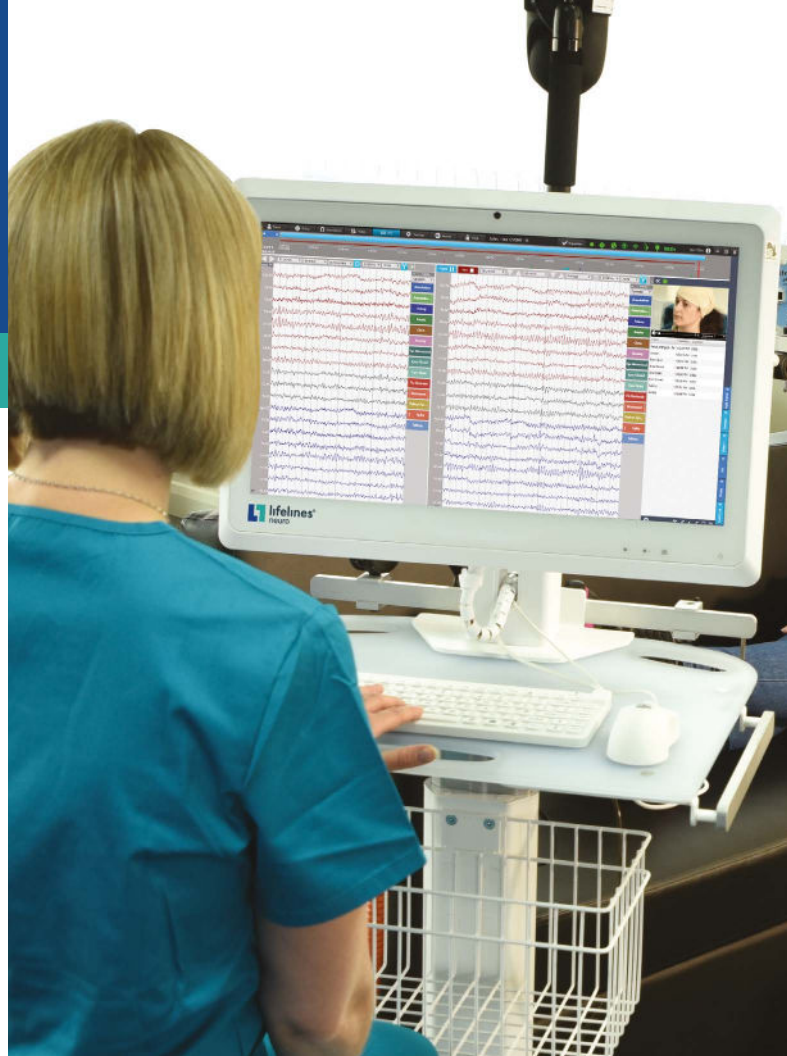

Connected EEG Solutions Inspired By Experts

Lifelines Neuro’s hospital and clinical EEG systems are supplied with iEEG cloud software. This powerful, yet easy-to-use software allows the acquisition, secure review and annotation of EEG study data from anywhere, at any time on almost any internet connected device.

Unlike other systems that rely on third party review software, the iEEG software suite is an end-to-end cloud-based solution that simplifies workflows and facilitates immediate review with expert consultation and collaboration wherever and whenever it is needed.

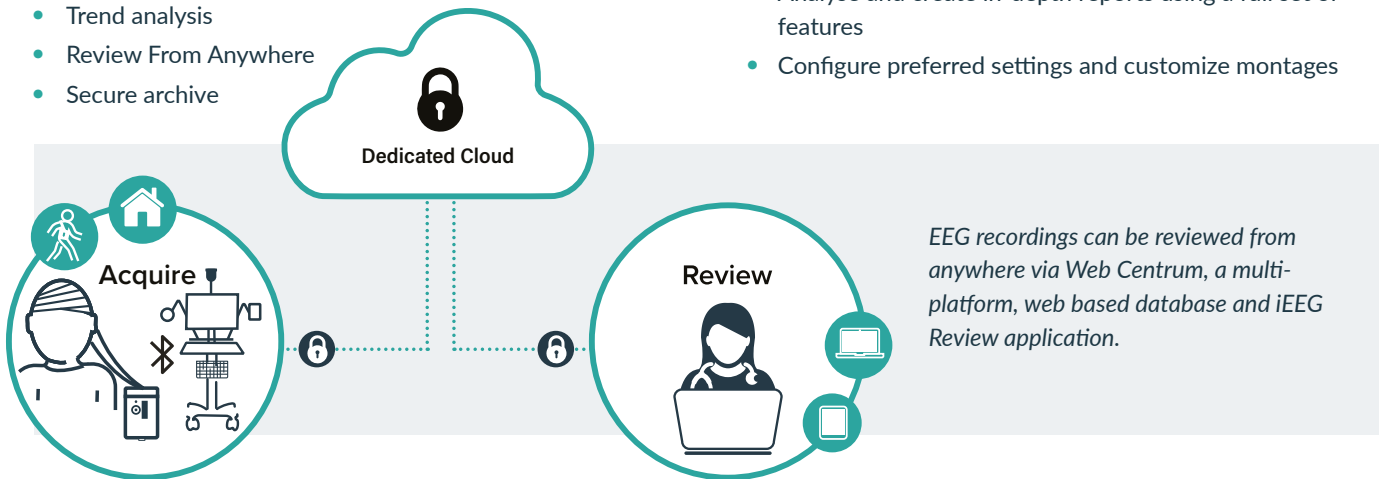

iEEG supports:

- Continuous EEG Monitoring With Team Monitor
- Intermittent Monitoring
- Continuous Monitoring Study View
- Continuous Monitoring Overview
- Spike And Seizure Detection (offline)
- Trend analysis
- Review From Anywhere
- Secure archive

iEEG features:

- View EEG data synchronized with HD video and audio data
- Chart parameter control
- Secure and convenient patient record storage
- Paging speed that outperforms remote desktop solutions
- Analyse and create in-depth reports using a full set of features
- Configure preferred settings and customize montages

Cloud-based EEG Software

Seamless workflow

Unlike other EEG software, iEEG cloud software delivers end-to-end review and acquisition, without the need to switch to third party review programs.

EEG studies can be reviewed seamlessly on almost any internet-connected device via the full-featured Web application.

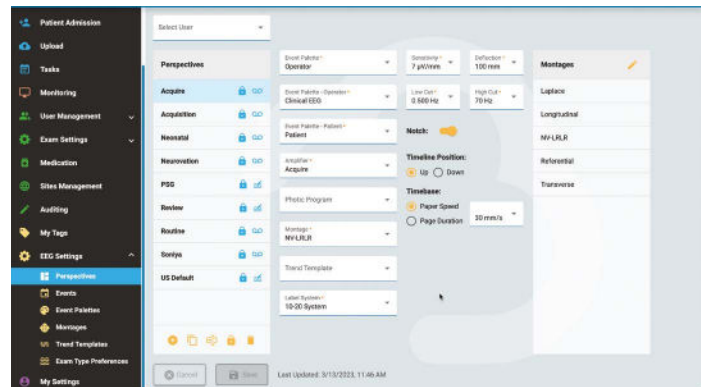

Trends

The fully-featured iEEG software provides EEG technologists, clinicians and neurologists with everything they need to record, monitor and review EEG studies reliably and efficiently. The addition of the built-in Trends feature facilitates a deeper dive into the recorded data for more detailed analysis. Trends can be added or removed with just a few clicks.

Perspectives

Found under the EEG Settings tab on the left hand side, the Perspectives feature, is a powerful and time-saving tool that allows you to apply settings (like style sheets) across the program based on study type, headbox used, or even specific users.
